DETAILED ACTION

Request for Continued Examination

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 28 May 2003 has been entered.

Summary of changes in this action

- 1. Although Examiner maintains that the art rejection of record is valid, such has been modified to provide stronger motivation.
- 2. The rejection under 35 U.S.C. § 112, second paragraph has been overcome by the cancellation of the corresponding claims.

New Matter

The amendment filed 29 January 2003 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is the limitation that the "voltage pull-up device is implemented as a transistor with less than $1.0~V_{BE}$ ".

Firstly, there is no "pull-up device" found to be disclosed that is a "transistor". The <u>only</u> element found to be disclosed that is a "pull-up device" that meets the claim limitations is element 214,314. However, there is no disclosure of element 214 or 314 being a "transistor".

Applicant is required to cancel the new matter in the reply to this Office Action.

Examiner has considered Applicant's remarks for the above rejection and has not found them to be persuasive. While Examiner agrees that element 309 is a pull-up element that can be

Application/Control Number: 09/970,297

Art Unit: 2816

"implemented as a transistor with less than $1.0~V_{BE}$ ", there is no support for such being separate from the "band-gap reference circuit" as claimed.

Claim Objections

Claim 1 is objected to because the phrase "less than 1.0 V_{BE} " is confusing. Generally, when referring to band-gap circuit 1 V_{BE} refers to the number of V_{BE} threshold referred to. Thus, it is suggested that "less than 1.0 V_{BE} " be changed to --a V_{BE} less than 1.0 voltages--.

Claim 7 is objected to for similar reasons as claim 1.

Claims 2-4, 6, 8 and 11-15 are objected to for the reasons discussed above with claims 1 and 7.

Appropriate corrections for the above discussed objections are required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 6-8, 11-13, 15-21 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kadanka et al. (USPN 5,621,308) in view of newly cited art to Mietus (USPN 5,666,046). Kadanka et al. disclose, in Fig. 2, a circuit comprising: "a band-gap reference circuit (73)"; "a buffer circuit (54)"; and "a voltage pull-up device (70)", wherein the "voltage pull-up device" has a "transistors (48)". Kadanka et al. does not expressly disclose that transistor 46 has a "less than 1.0 V_{BE}". However, it is notoriously well known, as expressly taught by Mietus (e.g., see Col. 1, lines 56-67), to use a voltage of 0.7 volts for the expect advantage of

Application/Control Number: 09/970,297

Art Unit: 2816

Page 4

using a lower supply voltage (e.g., 0.8 volts). Therefore, it would have been obvious for one

skilled in the art to manufacture transistor 48 with "less than 1.0 V_{BE}" for the expected advantage

allowing for a lower supply voltage.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Terry Cunningham whose telephone number is 703-308-4872.

The examiner can normally be reached on Monday-Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Timothy P. Callahan can be reached on 703-308-4876. The fax phone numbers for

Technology Center 2800 are 703-872-9318 for Before Final communications and 703-872-9319

for After Final communications. Please note, any faxed paper clearly stating DRAFT or

PROPOSED AMENDMENT at the top will be forwarded directly to the Examiner. All others

will be treated as a formal response and acted upon accordingly.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the Group receptionist whose telephone number is 703-308-0956.
